

Loop-IP7930-S/F Ethernet Demarcation Device

Preliminary

Description

The Loop-IP7930 is an Ethernet Demarcation Device at the Customer Premises to enforce the Ethernet traffic policing policies, such as rate limiting, QoS, and VLAN tagging functions.

Loop-IP7930 EDD could assure the service provider having a clean and well-organized traffic from customer into the network. With optional 100/1000M-SX/LX optical uplink interface, the IP7930 EDD can be located far away from the central access device.

Supported Link OAM per IEEE 802.3ah and End-2-end OAM per ITU Y.1731 /IEEE802.1ag, the IP7930 EDD is capable of supporting Carrier grade Ethernet Service.
